Summary | Solutions Engineer at Recruit41 working across three AI products: **Recruit41** (AI interviewing platform for enterprises, 50,000+ candidates), **Learn41** (AI mock interviews for students, owned 0→1 from architecture to first paying customer), and **Voqalize** (voice-agent platform). End-to-end ownership from architecture to revenue: full-stack and real-time voice AI engineering (React, Django, FastAPI, Pipecat, LiveKit/WebRTC), cloud infrastructure (GCP, Kubernetes, CI/CD), go-to-market, account management, and unit economics.

Education

M S Ramaiah Institute of Technology — **Bangalore, Karnataka**
Bachelor of Engineering in Electronics and Instrumentation — *2021 – 2025*
CGPA: 8.50

Experience

Recruit41 | *Solutions Engineer* — **June 2025 – Present**
Products: Recruit41 (AI interviewing platform for enterprises), Learn41 (AI mock interviews for students), Voqalize (voice-agent platform).

Recruit41: platform engineering

- Built the **AI interview planner** that creates interviews tailored to each client's roles, hiring needs, and grading criteria.
- Built the **real-time AI interview infrastructure** on **Pipecat voice pipelines** and **LiveKit/WebRTC**, and built the **interview recording pipeline**, which has served **50,000+ candidates**.
- Built the **post-interview pipeline** that runs **AI evaluation and video processing**, with one **single source of truth for AI scores** so grading stays consistent and trusted.
- Built the **AI proctoring system** that stops **cheating** in AI interviews: it flags violations, checks the camera, and shows an interview timeline for review.
- Built a **reliability system** that fixes failed interviews, using **BigQuery telemetry** and an **AI agent harness** that spots and fixes problems as they happen.
- Led the **end-to-end build of the ATS (Applicant Tracking System)**: job setup, candidate pipeline, and recruiter workflows, with **recruiter analytics dashboards** and **enterprise product analytics using PostHog**.
- Built the **Greenhouse ATS integration** that updates candidate and interview status automatically for enterprise clients.
- Built the **ACL-based RBAC system** in Django that gives enterprise clients fine-grained access control across the multi-tenant platform.
- Built the **internal billing and usage reporting system** that gives the **finance team** accurate usage data per platform and per client for **invoicing and revenue reporting**.
- **Cut infrastructure costs** by optimizing media processing, cloud resources, and **CI/CD pipelines** across the AI interview stack.

Learn41: product ownership, go-to-market and operations

- **Revenue:** launched Learn41 from 0→1 as product owner, designed its **solution architecture** end to end, including the **multi-tenant, cross-domain platform** that let it run on its own domain, generating **INR 1M+ in revenue**.
- **Go-to-market:** found leads and closed Learn41's **first paying customer**.
- **Account management:** owned the relationship and ran mock interviews for their students.
- **Pricing & P&L:** ran **unit economics and pricing analysis** on interview delivery costs to guide **P&L** decisions for the product.
- **AI coaching:** built **LLM-based evaluation pipelines** (prompt engineering) for student coaching and candidate feedback reports.

Voqalize: voice agents

- Helped build the **Voqalize proof of concept** for its **first customers**: an in-app **voice agent** (Pipecat, Gemini, tool calling) that answers questions and **operates the UI by voice**; the demo earned **industry recognition and awards**.

Think41 | *SDE-I* — **Feb 2025 – June 2025**

- Built CuraBot, a healthcare platform with role-based dashboards for patients, doctors, and admins (React.js, Node.js).
- Developed AI-powered chatbot for patient assistance and automated patient summary generation for doctors.
- Built LendSureAI, a credit risk analysis tool with AI-powered assessments and PDF reports (Django REST Framework).

dw3ll | *Software Developer Intern* — **Jan 2024 – Feb 2025**

- Populated and managed database with 1 million+ movie records including cast details and trailers from global sources.
- Developed REST APIs for watchlist management, user reviews, and personalized movie recommendations.

Skills

Core: Python, TypeScript, Django, FastAPI, React.js, PostgreSQL
Platform: GCP (Cloud Run, BigQuery), Kubernetes, Docker, GitHub Actions CI/CD, WebSocket, Pipecat, LiveKit/WebRTC, Playwright
AI/Data: LLM Prompt Engineering, Gemini/Vertex AI, Voice AI Agents, Tool Calling, AI Evaluation Pipelines, PostHog Analytics
Business: Go-to-Market Strategy, Client Acquisition, Account Management, Unit Economics, P&L Ownership
