Summary — Solutions Engineer building Learn41 from 0→1, a new mock-interview product for campus students, owning everything end-to-end from platform architecture to client acquisition and account management. Drove go-to-market strategy, closed and managed Learn41's first paying customer, and ran unit economics analysis to inform pricing and P&L decisions. In parallel, delivered core platform features at Recruit41 across RBAC, ATS integration, and real-time (LiveKit/WebRTC) interview infrastructure serving 50,000+ candidates, with 2+ years of experience spanning React, Django, and FastAPI.

Education

M S Ramaiah Institute of Technology — **Bangalore, Karnataka**
Bachelor of Engineering in Electronics and Instrumentation — *2021 – 2025*
CGPA: 8.50

Experience

Recruit41 | *Solutions Engineer* — **Oct 2025 – Present**

Learn41: Product Owner	Recruit41: Platform Engineering
– Generated **INR 1M+ in revenue** for Learn41 by designing and implementing its **solution architecture** end-to-end (**0→1 product build**), including the **multi-tenant, cross-domain platform extension** that let it launch on its own domain. – Drove **go-to-market strategy**: sourced leads and closed Learn41's **first paying customer**. – Acted as **account manager** for the paying customer, owning the relationship and personally conducting/managing mock interviews for their students. – Ran **unit economics and pricing analysis** on interview delivery costs, informing **P&L** decisions for the product line. – Built **LLM-based interview evaluation pipelines** (prompt engineering) for student coaching, plus candidate feedback reporting.	– Designed and implemented **ACL-based RBAC system** in Django, enabling granular access control across the multi-tenant platform for enterprise clients. – Built **Greenhouse ATS integration** enabling automated candidate and interview status updates for enterprise clients. – Rebuilt the **LiveKit/WebRTC**-based interview recording pipeline for performance and reliability, reducing failed and incomplete recordings at scale. – Established a single source of truth for AI interview scoring, increasing evaluator consistency and trust in automated grading. – Developed **AI proctoring system** with violation detection, camera compliance checks, and interview timeline visualization for candidate review.

Think41 | *SDE-I* — **Feb 2025 – Oct 2025**

- Built CuraBot, a healthcare management platform with role-based dashboards for patients, doctors, and admins using React.js and Node.js.
- Developed AI-powered chatbot for patient assistance and automated patient summary generation for doctors.
- Built LendSureAI, a credit risk analysis tool with AI-powered assessments, PDF report generation, and analysis history using Django REST Framework.

dw3ll | *Software Developer Intern* — **Jan 2024 – Feb 2025**

- Populated and managed database with 1 million+ movie records including cast details and trailers from global sources.
- Developed REST APIs for watchlist management, user reviews, and personalized movie recommendations.

Tata Advanced Systems Limited | *Associate Engineer Intern* — **Sept 2023 – Nov 2023**

- Assisted in PCB design and fabrication for military equipment (ATAGs, Night Vision goggles) using Altium, ensuring adherence to military standards.

Skills

Core: Python, TypeScript, Django, FastAPI, React.js, PostgreSQL
Platform: GCP, Kubernetes, Docker, WebSocket, LiveKit/WebRTC, Daily.co, Pipecat, CI/CD, Alembic
AI/Data: LLM Prompt Engineering, AI Evaluation Pipelines, PostHog Analytics
Business: Go-to-Market Strategy, Client Acquisition, Account Management, Unit Economics, P&L Ownership

Projects

CuraBot - Healthcare Management System **Mar 2025**

- Full-stack platform with JWT authentication, appointment scheduling, and admin analytics dashboard with Recharts visualizations.
- Deployed on cloud using Docker with role-based access control for patients, doctors, and administrators.

Deflix **Jan 2024 – Feb 2025**

- Developed a Blockchain based movie review and rating website to ensure transparency and efficient incentivisation of users.
- Developed APIs to enable community contributors to display their contributions, creating a structured and dynamic interface for showcasing achievements within the platform.

Smart Traffic Management using Machine Learning **Mar 2023 – Aug 2023**

- Developed a smart traffic management system using SUMO and Google Maps, enabling the simulation of real-life traffic on any selected road network.
- Created a model to dynamically adjust red light durations, reducing congestion by optimizing traffic flow in real time.
